SUMMARY

Platform / Site Reliability Engineer with 4 years operating production infrastructure at Apple Ad Platforms — 24 Apache Airflow clusters (12 on Amazon EKS, 12 on-premises), 50K+ production workflows, 10+ engineering teams. Track record: 5-minute MTTR on a fleet-wide outage, HTTP 502s eliminated across 15 environments, and a 24-environment zero-5XX release as Release Champion.

EXPERIENCE

Apple Ad Platforms (contract via QuestGlobal) — Platform Engineer / SRE Feb 2024 – Present

- Overturned an OOM misdiagnosis on a 706-restart CrashLoopBackOff (Exit 137), isolating CFS CPU-quota throttling tripping liveness probes at 94% quota saturation as the true cause; shipped 6 patches in a single day, reclaimed ~1,750m of phantom CPU reservation, and drained a 3-day 22-hour operational backlog.
- Eliminated HTTP 502s during Kubernetes API-server rolling updates — from 1–2 per deploy to 0 — by tuning pod lifecycle across 15 environments: startup probes (3-minute window), preStop hooks doubled (30s to 60s), and graceful termination extended (60s to 120s).
- Restored a fleet-wide DAG-parsing outage across 4 AWS environments at a 5-minute MTTR, tracing a cross-repository dependency deletion through 4 codebases to the single import failing the scheduler process-wide — recovering service for 10+ teams.
- Led the Apache Airflow 2.4.5 rollout across 24 environments (AWS and on-premises) as Release Champion for 50K+ workflows and 10+ teams, holding 0 HTTP 5XX on the API server through every cutover window under continuous pod-health monitoring.
- Architected the platform's 13-pipeline CI/CD system across 4 environments in 3 AWS accounts (dev/rvw/stg/prd) for 10+ teams and 50K+ production workflows — collapsing the consumer contract from 10+ environment variables to 2 and enforcing an IAM boundary between platform-owned S3 buckets and consumer code.
- Remediated a PostgreSQL performance regression on 2 metadata stores (5K+ workflows each) after surfacing a 182:1 sequential-to-index scan ratio (1.1M seq vs 6K index scans) and 7 unindexed tables; shipped 19 CREATE INDEX CONCURRENTLY migrations to production with zero downtime.
- Built a custom Airflow plugin adding PodPriorityClass and node-pool scheduling on Amazon EKS, eliminating a twice-monthly control-plane failure mode caused by worker eviction under node memory pressure across clusters running 50K+ workflows.

Persistent Systems — Software Engineer

Jan 2022 – Aug 2023

- Re-architected the Jenkins CI/CD pipeline for Java / Spring Boot microservices from 30 to 10 minutes, enabling 3x faster release cadence with automated multi-environment promotion and JUnit 5 / Mockito test gates at 85%+ coverage.

PROJECTS

DevQuest — self-hosted service on AWS · sushrutvaidya.in

Feb 2026 – Apr 2026

- Deployed a containerized Spring Boot service on AWS EC2 behind an nginx reverse proxy with GitHub Actions CI/CD and container-restart rollout for zero-downtime deploys.
- Designed cache-aside resilience: atomic Redis INCR with an in-memory fallback behind a sticky failure flag (no retry storm), and excluded Redis from the health-check aggregate so cache degradation cannot remove healthy pods from load-balancer rotation.

SKILLS

Kubernetes & Containers: Kubernetes, Docker, Amazon EKS, pod lifecycle tuning, resource quotas and limits, zero-downtime deployment, rolling updates

Cloud & IaC: AWS (EC2, S3, EKS, ALB, IAM, CloudTrail, multi-account), Terraform, Linux

CI/CD: Jenkins, GitHub Actions, Git, release management, multi-environment promotion

Observability: Prometheus, Grafana, Datadog, OpenTelemetry, StatsD, Telegraf, alerting, SLI / SLO

Reliability: Incident response, root cause analysis, MTTR reduction, on-call, capacity planning, postmortems

Languages & Data: Python, Bash, SQL, Java, PostgreSQL (index design, query optimization), Redis

EDUCATION

Yeshwantrao Chavan College of Engineering, Nagpur

2018 – 2022

Bachelor of Technology, Electronics and Telecommunication Engineering

HONORS & AWARDS

- Release Champion — Apache Airflow 2.4.5 rollout, 24 environments, 50K+ production workflows, Apple Ad Platforms.
- Patent Granted — Solar Energy Optimization System; Government of India Patent No. 551111, 2024.
- 1st Runner-Up — Persistent Systems Technothon 2023.
